

Vista Business, Using AdraOpen

Tech Tip:

AdraOpen on Vista Business

AdraOpen is supported on the Windows Vista Business platform. To build AdraOpen on this system it is necessary to define CPU as i386 in the DOS window you use to build:

➤ `set CPU=i386`

Note that when unpacking the AdraOpen `rpc_kit.tar` tar file the **`tar -xvf rpc_kit.tar`** command should be used to ensure that all necessary directories are created.
